PROJECTS

Project Name   Campus Area Network (CAN)

Team Size   4

Description   CAN has been used to transfer large size of file in college campus without any interruption. A campus area network is larger than a local area network LAN since it may span multiple buildings within a specific area. Most CANs are comprised of several LANs connected via switches and routers that combine to create a single network. They operate similar to LANs, in that users with access to the network (wired or wireless) can communicate directly with other systems within the network.
